## RDP RACK-MOUNT DISTRIBUTION ENCLOSURES

The RDP series Rack-Mount Distribution Enclosure provides both public and private network managers, installers and contractors a modular, easy to use solution for terminating and splicing optical fibers. The top and rear lids are removable making the enclosures easy to install. Splice trays are located behind the adapter plate bulkhead enabling the RDPs to have a space saving solution even when splicing is required. Available in four sizes, all units can be mounted in standard relay racks and cabinets.
